-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --  
Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

## DETAILED ACTION

### *Claim Rejections - 35 USC § 102*

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 8-15 are rejected under 35 U.S.C. 102(b) as being anticipated by DE 3820509. The reference shows a fuel injector, having the claimed elements including a nozzle body 10; and a valve needle positioned in the nozzle body, actuable by an actuator and acted upon by a restoring spring to keep a valve-closure member 20, which is operatively connected to the valve needle and faces a combustion chamber of an internal combustion engine, in sealing contact with a valve-seat surface in a non-actuated state of the actuator; wherein a surface of the fuel injector includes a concave shape in a transition region between the nozzle body and the valve-closure member. See Figure 2.

The fuel injector is adapted for direct injection of fuel into the combustion chamber. The transition region is formed by two mutually abutting surfaces of the nozzle body 10 and the valve-closure member 20, and one edge is formed on each of the nozzle body and the valve-closure member. The angle between the surfaces is smaller than 180° and the edges include edge angles that each amount to at least 90°, a sum of the edge angles amounts to at least 180° and the transition region is recessed relative to a surface plane.

***Conclusion***

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. See the cited documents showing similar fuel injectors.
